

# **HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)**

# Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

| Step   | Check                                   | Yes  | No  |
|--|---|--|---|
| 1 <b>START INSPECTIONS.</b><br>1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.><br>2) Perform the self-diagnosis. <Ref. to AC(diag)-8, OPERATION, Diagnostic Chart for Self-Diagnosis.> | Does the self-diagnosis operate?        | Go to step 2.  | <Ref. to AC(diag)-11, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>                                      |
| 2 <b>CONFIRM MALFUNCTION PART.</b><br>Confirm the malfunction part with self-diagnosis.  | Can the malfunction part be confirmed?  | Repair the malfunction part according to each diagnostics chart. | Go to step 3.   |
| 3 <b>CHECK COMPARTMENT TEMPERATURE.</b><br>1) Turn the A/C switch ON.<br>2) Set the temperature control dial to maximum cold position.<br>3) Check the compartment temperature changes.                                      | Is the compartment temperature changed? | Go to step 4.  | <Ref. to AC(diag)-15, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |
| 4 <b>CHECK A/C SYSTEM RESPONSE.</b><br>Change the temperature setting, and check the response of A/C system.   | Does the A/C system respond quickly?    | A/C system is OK.  | <Ref. to AC(diag)-15, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |

## General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 2. General Description

### A: CAUTION

- 1) Never connect the battery in reverse polarity. The Auto A/C control module will be destroyed instantly.
- 2) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as auto A/C control module.
- 3) Before disconnecting the connectors of each sensor and the auto A/C control module, be sure to turn off the ignition switch. The auto A/C control module may be damaged.
- 4) Every A/C-related part is a precision part. Do not drop them.
- 5) Airbag system wiring harness is routed near the A/C control panel (auto A/C control module) and junction box.

#### CAUTION:

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the A/C control panel (auto A/C control module) and junction box.

### B: INSPECTION

Before performing diagnosis, check the following items which might affect A/C system problems.

#### 1. BATTERY

- 1) Measure the battery voltage and specific gravity of electrolyte.

#### Standard voltage: 12 V

#### Specific gravity: Above 1.260

- 2) Check the condition of the fuses for A/C system power supply and other fuses.
- 3) Check the condition of the harnesses and harness connectors connection.

#### 2. ASPIRATOR HOSE

- 1) Turn the ignition switch to ON and push the A/C switch.
- 2) Turn the temperature control dial to maximum hot position.
- 3) Turn the air flow control dial to "DEF" position.
- 4) Turn the fan speed control dial to MAX speed position.

- 5) Firmly hold a thin paper (b) in front of the in-vehicle sensor suction port (a) for the auto A/C control module and check that the paper moves towards the port indicating that air is being sucked into the port.

#### NOTE:

Ensure the paper does not get sucked into the port.

AC-01124

- 6) If the paper does not move at all, remove the auto A/C control module <Ref. to AC-31, REMOVAL, Control Unit (Auto A/C Model).> and check for improper connection of the aspirator hose (A), auto A/C control module and heater unit, and secure as necessary.

AC-01114

#### 3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.

AC-01394

#### 4. CONTROL LINKAGE

- 1) Check the state of mode door linkage.
- 2) Check the state of air mix door linkage.
- 3) Check the state of intake door linkage.

## General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

---

### 5. CONTROL SWITCHES

Start and warm-up the engine completely.

#### 1) Inspection using switches

| No. | Item to be checked                         | Switch position   | Judgment standard   |
|-----|--|---|---|
| 1   | Air flow control dial                      | Turn the dial to the right.   | Outlet opening (mode) switches AUTO → VENT → BILEVEL → HEAT → DEF/HEAT → DEF each time turning the dial.  |
| 2   | Fan speed control dial                     | Turn the dial to the right  | Fan speed switches OFF → AUTO → 1st — 25th each time turning the dial.  |
| 3   | FRESH/RECIRC switch                        | Press the FRESH/RECIRC switch.  | Inlet opening switches RECIRC → FRESH each time pressing the switch.  |
|     |  | Press the FRESH/RECIRC switch longer (more than 1.0 seconds).   | LED blinks twice, and switches to AUTO.   |
| 4   | A/C switch                                 | Turn the A/C switch to ON with the fan speed control dial position other than OFF.  | LED comes on, and the compressor will be operated.  |
|     |  | Press the A/C switch longer (more than 1.0 seconds).  | LED blinks twice, and switches to AUTO.   |
| 5   | Auto function<br>Operate from 1) in order. | 1) Set the following dials and switches to AUTO. <ul style="list-style-type: none"><li>• Air flow control dial</li><li>• Fan speed control dial</li><li>• FRESH/RECIRC switch</li><li>• A/C switch</li></ul> 2) Turn the temperature control dial to the left fully, to set to the maximum cool position. | <ul style="list-style-type: none"><li>• Outlet air temperature: COOL</li><li>• Fan speed: MAX</li><li>• Outlet opening: VENT</li><li>• Inlet opening: Internal air</li><li>• Compressor: AUTO</li></ul>           |
|     |  | 3) Turn the temperature control dial to the right slowly, to change the setting gradually to the maximum hot position.  | <ul style="list-style-type: none"><li>• Outlet air temperature: COOL → HOT</li><li>• Fan speed: AUTO</li><li>• Outlet opening: AUTO</li><li>• Inlet opening: AUTO</li><li>• Compressor: AUTO</li></ul>            |
|     |  | 4) Turn the temperature control dial to the right fully, to set to the maximum hot position.  | <ul style="list-style-type: none"><li>• Outlet air temperature: HOT</li><li>• Fan speed: MAX</li><li>• Outlet opening: HEAT</li><li>• Inlet opening: External air</li><li>• Compressor: AUTO</li></ul>            |
| 6   | Defroster interlock                        | Turn the air flow control dial to DEF or DEF/HEAT position.   | <ul style="list-style-type: none"><li>• Outlet air temperature: AUTO</li><li>• Fan speed: AUTO</li><li>• Outlet opening: DEF or DEF/HEAT</li><li>• Inlet opening: External air</li><li>• Compressor: ON</li></ul> |
| 7   | Rear window defogger switch                | Press the rear window defogger switch.  | LED comes on.   |

#### 2) Inspection of illumination control

| No. | Item to be checked | Switch operation                | Judgment standard   |
|-----|--------------------|---------------------------------|---|
| 1   | Illumination       | Turn the lighting switch to ON. | Illumination comes on. LED goes dim if it has been illuminated. |

|--|-------------------------------------|-----------------------|--|
| <b>1 CHECK FUSE.</b><br>1) Remove the No. 1, No. 2 and No. 17 fuses in fuse & relay box.<br>2) Check the condition of fuses.   | Are any of the fuses blown-out?     | Replace the fuse.     | Go to step 2.  |
| <b>2 CHECK POWER SUPPLY TO BLOWER FAN MOTOR.</b><br>1) Turn the ignition switch to ON.<br>2) Turn the fan speed control dial to the right.<br>3) Measure the voltage between blower fan motor and chassis ground.<br><br><i>Connector &amp; terminal<br/>(B87) No. 1 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?      | Go to step 3.         | Repair the open circuit in harness for blower fan motor power supply line. |
| <b>3 CHECK BLOWER FAN MOTOR RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the blower fan motor relay.<br>3) Connect the battery positive (+) terminal to No. 1 terminal and negative (-) terminal to No. 3 terminal of blower fan motor connector.<br>4) Measure the resistance between No. 2 and No. 4 terminals.<br><br><i>Terminals<br/>No. 2 — No. 4:</i> | Is the resistance less than 1 Ω?    | Go to step 4.         | Replace the blower fan motor relay.  |
| <b>4 CHECK BLOWER FAN MOTOR.</b><br>1) Disconnect the connector from blower fan motor.<br>2) Connect the battery positive (+) terminal to No. 1 terminal and negative (-) terminal to No. 2 terminal of blower fan motor connector.<br>3) Make sure that the blower fan motor is operated.   | Does the blower fan motor operate?  | Go to step 5.         | Replace the blower fan motor.  |
| <b>5 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.   | Is there poor contact in connector? | Repair the connector. | Replace the auto A/C control module.                                       |

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY.

### TROUBLE SYMPTOM:

- Compartment temperature is not changed. (No cool air is discharged.)
- A/C system does not respond quickly.

### WIRING DIAGRAM:

AC-01395

# Diagnostics for A/C System Malfunction

## HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>1 CHECK FUSE.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the No. 2 fuse in main fuse box.<br>3) Check the condition of fuse.  | Is the fuse blown-out?                             | Replace the fuse.                                    | Go to step 2.   |
| <b>2 CHECK POWER SUPPLY TO MAGNET CLUTCH OF A/C COMPRESSOR.</b><br>1) Start the engine, and turn A/C switch to ON.<br>2) Set the temperature control dial to maximum cold position.<br>3) Measure the voltage between magnet clutch connector and chassis ground.<br><i>Connector &amp; terminal<br/>(F24) No. 1 (+) — Chassis ground (-):</i>  | Is the voltage more than 10 V?                     | Go to step 3.  | Repair the open circuit in harness for power supply line of the A/C compressor.         |
| <b>3 CHECK SIGNAL VOLTAGE TO A/C RELAY.</b><br>1) Turn the ignition switch to ON.<br>2) Turn the A/C switch to ON.<br>3) Measure the signal voltage between A/C relay and chassis ground.<br><i>Connector &amp; terminal<br/>(F129) No. 7 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?                     | Go to step 4.  | Repair the open circuit in harness for A/C relay signal circuit.                        |
| <b>4 CHECK A/C RELAY.</b><br>Check the A/C relay. <Ref. to AC-37, INSPECTION, Relay and Fuse.>  | Is the operation of the relay OK?                  | Go to step 5.  | Replace the A/C relay.  |
| <b>5 CHECK OPERATION OF MAIN FAN MOTOR.</b><br>1) Start the engine.<br>2) Turn the A/C switch to ON.<br>3) Check the operation of main fan motor.   | Does the radiator main fan operate?                | Go to step 10.                                       | Go to step 6.   |
| <b>6 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</b><br><b>CAUTION:</b><br><b>Be careful not to overheat the engine during repair.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from main fan motor.<br>3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F).<br>4) Stop the engine and turn ignition switch to ON.<br>5) Measure the voltage between main fan motor connector and chassis ground.<br><i>Connector &amp; terminal<br/>(F17) No. 1, 2 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?                     | Go to step 7.  | Repair the open circuit in harness for power supply circuit.                            |
| <b>7 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between main fan motor connector and chassis ground.<br><i>Connector &amp; terminal<br/>(F17) No. 3, 4 — Chassis ground:</i>   | Is the resistance less than 1 Ω?                   | Go to step 8.  | Repair the open circuit in harness between main fan motor connector and chassis ground. |
| <b>8 CHECK POOR CONTACT.</b><br>Check poor contact in main fan motor connector.   | Is there poor contact in main fan motor connector? | Repair the poor contact in main fan motor connector. | Go to step 9.   |
| <b>9 CHECK MAIN FAN MOTOR.</b><br>Connect the battery positive (+) terminal to terminal No. 1 and 2, and negative (-) terminal to terminal No. 3 and 4.   | Does the main fan rotate?                          | Repair the poor contact in main fan motor connector. | Replace the main fan motor with a new one.  |

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| 10 <b>CHECK OPERATION OF SUB FAN MOTOR.</b><br>Check the operation of sub fan motor.   | Does the radiator sub fan operate?                        | Go to step 15.                                      | Go to step 11.   |
| 11 <b>CHECK POWER SUPPLY TO SUB FAN MOTOR.</b><br><br><b>CAUTION:</b><br><b>Be careful not to overheat the engine during repair.</b><br><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from sub fan motor.<br>3) Start the engine, and warm it up until engine coolant temperature increases over 100°C (212°F).<br>4) Stop the engine and turn the ignition switch to ON.<br>5) Measure the voltage between sub fan motor connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(F16) No. 1, 2 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V?                            | Go to step 12.                                      | Repair the open circuit in harness for power supply circuit.                               |
| 12 <b>CHECK GROUND CIRCUIT OF SUB FAN MOTOR.</b><br><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between sub fan motor connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(F16) No. 3, 4 — Chassis ground:</b>   | Is the resistance less than 1 Ω?                          | Go to step 13.                                      | Repair the open circuit in harness between sub fan motor connector and chassis ground.     |
| 13 <b>CHECK POOR CONTACT.</b><br>Check poor contact in sub fan motor connector.  | Is there poor contact in sub fan motor connector?         | Repair the poor contact in sub fan motor connector. | Go to step 14.   |
| 14 <b>CHECK SUB FAN MOTOR.</b><br>Connect the battery positive (+) terminal to terminal No. 1 and 2, and negative (-) terminal to terminal No. 3 and 4.  | Does the sub fan rotate?                                  | Repair the poor contact in sub fan motor connector. | Replace the sub fan motor with a new one.  |
| 15 <b>CHECK EACH SENSOR AND POTENTIOMETER.</b><br>Check the sensors and potentiometer for proper operation using the self-diagnostic function. <Ref. to AC(diag)-8, Diagnostic Chart for Self-Diagnosis.>  | Is the operation of each sensor and potentiometer normal? | Go to step 16.                                      | Check the sensor and circuit. <Ref. to AC(diag)-24, Diagnostic Procedure for Sensors.>     |
| 16 <b>CHECK CONNECTION OF ASPIRATOR HOSE.</b><br>Make sure the connection of aspirator hose is correct.  | Is the connection of aspirator hose correct?              | Go to step 17.                                      | Repair the aspirator hose connection.  |
| 17 <b>CHECK EACH ACTUATOR.</b><br>Check the actuators for proper operation using the self-diagnostic function. <Ref. to AC(diag)-8, Diagnostic Chart for Self-Diagnosis.>  | Is the operation of each actuator normal?                 | Go to step 18.                                      | Check the actuator and circuit. <Ref. to AC(diag)-18, Diagnostic Procedure for Actuators.> |
| 18 <b>CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.  | Is there poor contact in connector?                       | Repair the connector.                               | Replace the auto A/C control module.   |

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 7. Diagnostic Procedure for Actuators

### A: INTAKE DOOR ACTUATOR

#### TROUBLE SYMPTOM:

FRESH/RECIRC mode is not changed.

#### WIRING DIAGRAM:

AC-01424

## Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step   | Check                                    | Yes                   | No   |
|--|--|-----------------------|--|
| <b>1 CHECK FUSE.</b><br>1) Remove the No. 17 fuse in fuse & relay box.<br>2) Check the condition of fuse.  | Is the fuse blown-out?                   | Replace the fuse.     | Go to step 2.  |
| <b>2 CHECK SIGNAL VOLTAGE.</b><br>1) Change the air intake to RECIRC by pushing FRESH/RECIRC switch.<br>2) Measure the voltage between auto A/C control module and chassis ground.<br><i>Connector &amp; terminal<br/>(B282) No. 15 (+) — Chassis ground (-):</i>  | Is the voltage less than 1 V?            | Go to step 3.         | Repair the short circuit in harness for power supply line.                                   |
| <b>3 CHECK SIGNAL VOLTAGE.</b><br>1) Change the air intake to FRESH with pushing FRESH/RECIRC switch.<br>2) Measure the voltage between auto A/C control module and chassis ground.<br><i>Connector &amp; terminal<br/>(B282) No. 7 (+) — Chassis ground (-):</i>  | Is the voltage less than 1 V?            | Go to step 4.         | Repair the short circuit in harness for power supply line.                                   |
| <b>4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND FRESH/RECIRC ACTUATOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from auto A/C control module and intake door actuator.<br>3) Measure the resistance of harness between auto A/C control module and intake door actuator.<br><i>Connector &amp; terminal<br/>(B282) No. 15 — (B91) No. 1:</i> | Is the resistance less than 1 $\Omega$ ? | Go to step 5.         | Repair the open circuit in harness between auto A/C control module and intake door actuator. |
| <b>5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND FRESH/RECIRC ACTUATOR.</b><br>Measure the resistance of harness between auto A/C control module and intake door actuator.<br><i>Connector &amp; terminal<br/>(B282) No. 7 — (B91) No. 2:</i>  | Is the resistance less than 1 $\Omega$ ? | Go to step 6.         | Repair the open circuit in harness between auto A/C control module and intake door actuator. |
| <b>6 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.   | Is there poor contact in connector?      | Repair the connector. | Replace the auto A/C control module.   |

| <b>4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from auto A/C control module.<br>3) Measure the resistance of harness between auto A/C control module and evaporator sensor.<br><br><i>Connector &amp; terminal</i><br><b>(B256) No. 2 — (B283) No. 7:</b> | Is the resistance less than 1 Ω?                 | Go to step 5.         | Repair the open circuit in harness between auto A/C control module and evaporator sensor. |
| <b>5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b><br>Measure the resistance of harness between auto A/C control module and evaporator sensor.<br><br><i>Connector &amp; terminal</i><br><b>(B256) No. 1 — (B283) No. 17:</b>  | Is the resistance less than 1 Ω?                 | Go to step 6.         | Repair the open circuit in harness between auto A/C control module and evaporator sensor. |
| <b>6 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.  | Is there poor contact in connector?              | Repair the connector. | Replace the auto A/C control module.  |

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## D: SUNLOAD SENSOR

### TROUBLE SYMPTOM:

- Sensor identified that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identified that sunlight is at minimum. Then, A/C system is controlled to HOT side.

### NOTE:

When the sunload sensor is checked indoors or in the shade, it may be diagnosed as open circuit. Always check the sunload sensor at a place where sun shines directly on it.

### WIRING DIAGRAM:

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step  | Check                                    | Yes                   | No   |
|---|--|-----------------------|--|
| <b>1 CHECK INPUT VOLTAGE TO SUNLOAD SENSOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the input voltage to sunload sensor.<br><b>Connector &amp; terminal</b><br><i>(i51) No. 2 (+) — Chassis ground (-):</i>   | Is the voltage approx. 5 V?              | Go to step 3.         | Go to step 2.  |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from auto A/C control module.<br>3) Measure the resistance of harness between auto A/C control module and sunload sensor.<br><b>Connector &amp; terminal</b><br><i>(i51) No. 2 — (B283) No. 16:</i> | Is the resistance less than 1 $\Omega$ ? | Go to step 3.         | Repair the harness between auto A/C control module and sunload sensor. |
| <b>3 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b><br>Measure the resistance of harness between auto A/C control module and sunload sensor.<br><b>Connector &amp; terminal</b><br><i>(i51) No. 1 — (B283) No. 17:</i>   | Is the resistance less than 1 $\Omega$ ? | Go to step 4.         | Repair the harness between auto A/C control module and sunload sensor. |
| <b>4 CHECK THE INPUT VOLTAGE TO AUTO A/C CONTROL MODULE.</b><br>1) Connect the auto A/C control module connector.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between auto A/C control module connector terminals.<br><b>Connector &amp; terminal</b><br><i>(B283) No. 16 (+) — (B283) No. 17 (-):</i>                                      | Is the voltage approx. 2.5 V?            | Go to step 5.         | Replace the sunload sensor.  |
| <b>5 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.  | Is there poor contact in connector?      | Repair the connector. | Replace the auto A/C control module.                                   |

**Diagnostics with Phenomenon****9. Diagnostics with Phenomenon****A: INSPECTION**

| Symptom  | Problem parts  |
