4. Engine Coolant

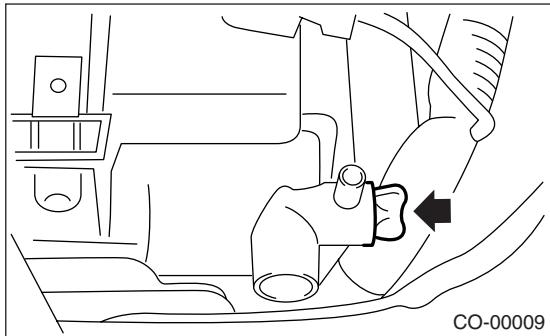

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Remove the drain cock to drain engine coolant into container.

NOTE:

- Remove the coolant filler tank cap so that engine coolant will drain faster.
- If engine coolant adheres to the exhaust pipe, wipe it off completely.

- 4) Install the drain cock.

2. FILLING OF ENGINE COOLANT

- 1) Pour cooling system conditioner through the filter neck.

Cooling system protective agent:

COOLING SYSTEM CONDITIONER (Part No. SOA635071)

- 2) Fill engine coolant into the coolant filler tank up to filler neck position.

Coolant capacity (fill up to "FULL" level):

AT model

Approx. 7.6 l (8.0 US qt, 6.7 Imp qt)

MT model

Approx. 7.7 l (8.1 US qt, 6.8 Imp qt)

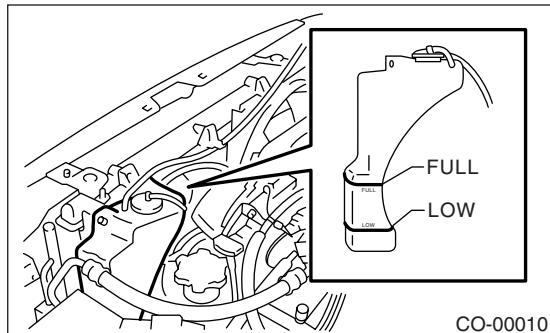

CAUTION:

Do not mix up the coolant filler tank side cap with radiator side cap.

NOTE:

- Do not remove the radiator side cap when filling engine coolant.
- The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crank-case. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 3) Fill engine coolant into the reservoir tank up to "FULL" level.

- 4) Close the coolant filler tank cap, start the engine and race 5 to 6 times at less than 3,000 rpm, then stop the engine. (Complete this operation within 40 seconds.)

- 5) Wait for one minute after the engine stops, open the coolant filler tank cap. If the engine coolant level drops, add engine coolant to the filler neck position of radiator.

- 6) Perform the procedures 4) and 5) again.

- 7) Attach the coolant filler tank cap and reservoir tank cap properly.

- 8) Start the engine and operate the heater at maximum hot position and the blower speed setting to "LO".

- 9) Run the engine at 2,000 rpm or less until radiator fan starts and stops.

NOTE:

- Be careful with the engine coolant temperature gauge to prevent overheating.
- If the radiator hose becomes to harden by the pressure of engine coolant, air bleeding operation seems to be almost completed.

- 10) Stop the engine and wait until engine coolant temperature lowers to 30°C (86°F) or less.

- 11) Open the coolant filler tank cap. If the engine coolant level drops, add engine coolant into the coolant filler tank up to the filler neck position and the reservoir tank to "FULL" level.

- 12) Attach the coolant filler tank cap and reservoir tank cap properly.

- 13) Operate the heater at maximum hot position and the blower speed setting to "LO" and start the engine. Race at less than 3,000 rpm. If the flowing sound is heard from heater core, repeat the procedures from step 9).

- 14) Install the collector cover.

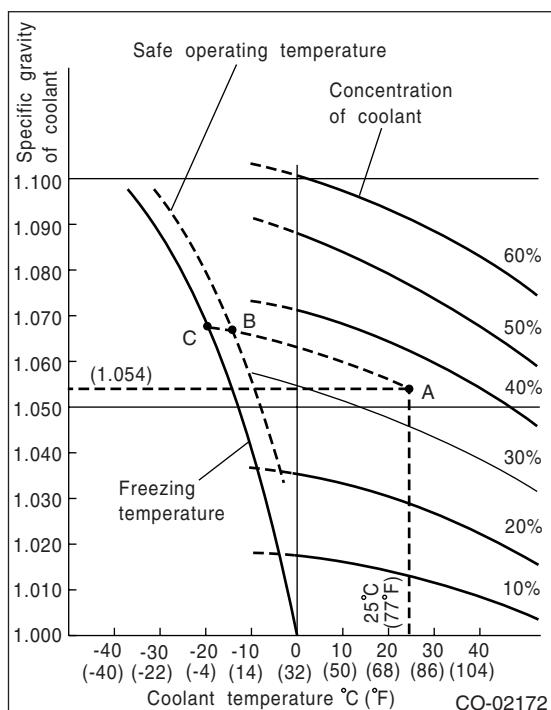

B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054 and the concentration is 35% (point A), the safe operating temperature is –14°C (7°F) (point B), and the freezing temperature is –20°C (–4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

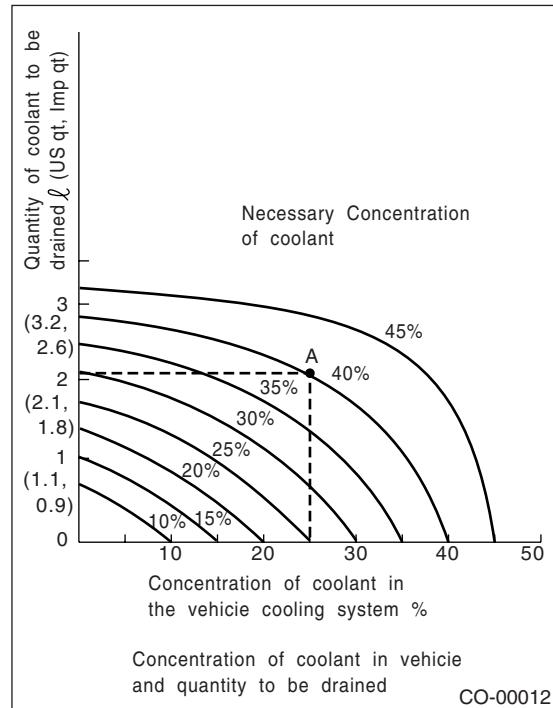

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 l (2.2 US qt, 1.8 Imp qt). Drain 2.1 l (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 l (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

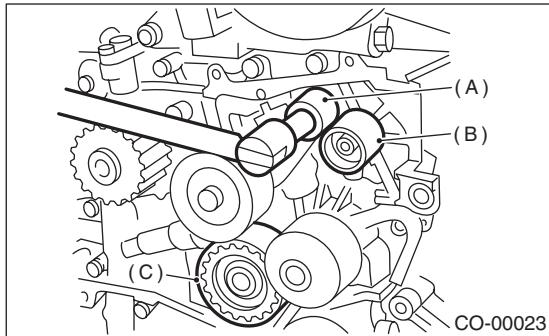

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.
